

5 RADIATION-CURABLE COATINGS FOR INK JET PRINTING

10 ABSTRACT OF THE INVENTION

15 This invention pertains to radiation-curable aqueous compositions comprising a mixture
20 of water-reducible oligomer, monomer, and water-insoluble cationically-modified latex. More
 particularly, the invention pertains to radiation-curable aqueous compositions that are suitable for
 use as ink jet printing receptive coatings and in the production of ink jet printable products.
